A practical new alternative for safe, ergonomic valve box lid removal; use on virtually all 5-1/4" “Buffalo Style” valve boxes.

**BENEFITS:**
- Improves worker safety by eliminating a major source of hand and finger injuries.
- Easy to use.
- Intuitive design for easy training.
- Better than screwdrivers (which often break!) for this task.
- Lid Lifter devices are writable with indelible marker.
- Manufactured from high strength carbon steel.
- Available with yellow or blue powder coating for maximum corrosion resistance and visibility.
- Optional 25" Tee Handle Extension enables lid removal without bending over. Optional palm grips reduce hand fatigue as well as the gripping force needed, while protecting hands from hot and cold metal.

**DESCRIPTION**ighting and safety of a common task.”

Insulating Palm Grips

These foam palm grips are ideal for small crescent wrenches, 14” pipe wrenches and screwdrivers, and 18”, 24” and 36” pipe wrenches. They slide over the handles of hand tools and dramatically improve ergonomics and comfort by:

- Cushioning the hard surface contact with the hand.
- Reducing the gripping force needed.
- Making it easier to torque or twist the tool.
- Keeping hands from hot and cold metal.

The grips are manufactured from durable open cell polymer material. They are washable, but do not retain water. Apply to any clean tool by wetting the tool surface and the inside of the grip with water or rubbing alcohol, then tug the grip over the end of the tool and into position, and let it dry.

The small size has a contoured shape for easier gripping of small tools; medium and large sizes are designed so 18”, 24”, and 36” aluminum pipe wrenches still fit inside aluminum handle extenders.
